

MOBILE MILLING WITH MOBILE WELDING SOLUTION

OUR COMPANY

open the new solution for maintain of the Die Cast Machine in locally directly the Customer plant, how the Customer's can avoid the additional risks of the disassembly of the DCM cells.

Regarding additional jobs for disassembly of the DCM and peripherals and after the repair to reinstall and commissioning of the complete cell.

With our Complex solution NO RISK for the peripherals removing NO RISK for the DCM disassembly we know regarding our experience the most of the situation need to replace the fix nuts sometimes the tie bars too just I listed the most expensive parts. Why want to choice the riskiest way then we have great solution for our Customers and Further Partners.

OUR SOLUTION

is the next: we welding the surface before milling the plates around 4-5mm thickness with high content Cr-Ni material and after we milling your plates and finally your machine has a 3-4mm higher density thickness material with really good advantages for rusty of the die plate too.

We can do this activity NO LONGER time than you do in normal solutions without further risks.

Please do not hesitate let ask our quotation for this operation as is possible.
Thank you in advance for our and further Customers too.
